TECHNICAL PORTFOLIO CASE STUDY: CLOUD ITSM OPERATIONS DEPLOYMENT

- **Systems Administrator & Infrastructure Engineer:** Michael Jan Lansangan
 - **Global Framework Baseline:** ITIL v4 Service Delivery & Operations Standards
 - **Core Engineering Platform:** Atlassian Jira Service Management (Cloud Architecture)
 - **Mobile Synchronization Engine:** Jira Cloud Mobile Framework
 - **Live ITSM Portal URL:** <https://michaeljanlansangan.atlassian.net/servicedesk/customer/portal/1>
-

Live ITSM Portal QR Code:

SECTION 1: EXECUTIVE SUMMARY & ARCHITECTURAL OBJECTIVE

This technical portfolio pieces together the complete provisioning, secure access pathing, and systematic customization of a cloud-native **IT Service Management (ITSM)** environment.

The primary structural goal was to deploy an operational framework that models standard corporate operations, seamlessly bridging the workflow gap between regular institutional employees (**Frontend User Gateway**) and technical infrastructure engineers (**Backend Administration Console**).

- **Frontend Design Layer:** Configured a secure, open, completely login-free gateway. Stripping away standard account registration walls eliminates reporting barriers, allowing remote staff or evaluating recruiters to log emergency incidents without experiencing restrictive credential blocks.
 - **Backend Control Layer:** Mapped incoming user issues directly to structured **ITIL Work Types** to optimize workload distribution, enforce automated Service Level Agreements (SLAs), and protect secure internal troubleshooting engineering logs from outside viewers.
-

SECTION 2: FRONTEND CLIENT REQUEST GATEWAY & INTAKE LIFECYCLE

The frontend architecture serves as the customer service layout, specifically optimized to eliminate reporting friction for regular staff members during widespread or localized system breakdowns. (<https://michaeljanlansangan.atlassian.net/servicedesk/customer/portal/1>).

Michael Jan's Corporate Global IT Helpdesk

Welcome! You can raise a request for Corporate IT Support Desk using the options provided.
Recruiter Notice: You are invited to click any form below to test my live system. Entering your professional email address is required to receive the automated ticket tracking receipt. Submitting a request triggers an immediate push notification straight to my administrator console and mobile IT alert framework.

Contact us about

Common Requests

Get IT help, Request a new account, Report a system problem, Report broken hardware

Computers

Get IT help, Request new software, Request new hardware, Report broken hardware

Logins and Accounts

Request admin access, Request a new account, Onboard new employees

Applications

Request new software, Report a system problem

Servers and Infrastructure

Report a system problem, Report broken hardware

Required fields are marked with an asterisk *

(Employee or Recruiter's Email Here)

Summarize the problem *

Widespread Internet Failure on Office Desktops and Laptops

Describe what happened and how it occurred *

Normal text ▾ | **B** *I* ... | A ▾ | :≡ ≡: | 🔗 📎 😊 🏠 ⚙️ ⓘ 99 + ▾

All staff laptops and desktop workstations in the main accounting and admin room suddenly lost internet connectivity. The network icon on the computers shows "No Internet Access." Staff cannot access company files or corporate email. Urgent support needed.

Affected hardware

Main Office Workstations (Desktops & Laptops)

Frontend Design Architecture & Field Flow Analysis:

- **Zero-Login Public Gateway:** Configured global site-wide permissions to bypass native authentication loops. This allows users or assessing recruiters to reach specific forms seamlessly without meeting mandatory login walls.
- **Context-Driven Validation Mapping:** As demonstrated in the live intake form for the network emergency, non-technical users are systematically guided through simple text fields to feed clean data to the backend:
 - **Email Ingestion Targeting:** The customized field indicator (Employee or Recruiter’s Email Here) ensures explicit tracking clarity, directing the automated ticket receipt straight to the proper outside stakeholder.
 - **End-User Hardware Diagnostics:** Regular employees pinpoint symptoms directly via everyday objects like Main Office Workstations (Desktops & Laptops) rather than guessing complex server-room root causes.
 - **Dynamic Triage Inputs:** Simple dropdowns lock down urgency metrics to *Critical* and impact ranges to *Extensive / Widespread*, pushing calibrated severity data straight into the backend database.

SECTION 3: BACKEND CONSOLE OPERATIONS & WORKFLOW LIFECYCLE

Once submitted on the frontend, requests are instantly ingested into the private backend control panel as structured ITIL records. The administrative dashboard acts as a central operational console, dynamically tracking, prioritizing, and managing all open workload pipelines.

Structural Analysis of the Main Queue Columns:

- **Request Type & Operational Classification:** Automatically categorizes user issues into predefined functional templates based on frontend selection.
- **System Key Tracking:** Assigns a permanent database identifier (CISD-5, CISD-2, CISD-4, CISD-3) across **all 4 active issues** to ensure a flawless audit trail.
- **Live Lifecycle Dropdown Menu:** Displays your real-time workflow controls where the administrator can physically transition an issue down a verified ITIL progress path:
 - **Investigate → [Work in progress]:** Engaged when active hands-on technical diagnostics begin.
 - **Pending → [Pending]:** Freezes response timers when waiting on external hardware or third-party vendor delivery.
 - **Resolve → [Completed]:** Officially closes out the ticket once normal business operations are verified 100% stable.
 - **Cancel → [Canceled]:** Permanently removes duplicate logs without corrupting the department's performance analytic data.

Full 4-Ticket Queue Priority Matrix:

- 1. **Ticket Reference CISD-5 (Highest Priority / Widespread Impact):** Widespread internet and connectivity failure cutting off office workstation access.
 - 2. **Ticket Reference CISD-2 (High Priority / Significant Impact):** Microsoft 365 identity lockout due to an active Multi-Factor Authentication token error.
 - 3. **Ticket Reference CISD-4 (Medium Priority / Moderate Impact):** Preventative asset tracking for a replacement server room UPS backup battery from an outside vendor.
 - 4. **Ticket Reference CISD-3 (Low Priority / Localized Impact):** Scheduled routine hardware staging, network provisioning, and credential deployment for upcoming staff onboarding.
-

SECTION 4: LIVE INCIDENT WORKFLOW LIFECYCLE & ENGINEERING DIALOGUE

When an active crisis is triaged, the systems administrator utilizes integrated workflow engines to immediately claim absolute accountability and log a secure, step-by-step troubleshooting path.

Incident assigned to self for immediate remediation. Initiated remote diagnostic ping tests to the core office switch; localized interface ports are currently completely unresponsive. Preparing physical dispatch to server rack location to inspect the hardware power supply unit and verify uplink connection stability. Setting status to Work in Progress.

Cancel

Update

Technical Breakdown of the Engineering Interface:

- **Explicit Incident Accountability:** Hard-maps **Michael Jan Lansangan** to the active *Assignee* field during the transition phase, verifying immediate engineering ownership to the evaluating employer.
- **Administrative Comment Sandboxing:** Exploits the secure **"Add internal note"** channel to document real-time network hardware diagnostics:
- This loops complex infrastructure routes and device configurations safely inside the IT department, while keeping the frontend client tracking clean, simple, and jargon-free.

SECTION 5: MOBILE INFRASTRUCTURE PORTABILITY & ON-CALL AVAILABILITY

To guarantee uninterrupted service availability for corporate networks, the cloud platform synchronizes instantly with the administrator's mobile device framework.

Mobile Notification & Monitoring Analysis:

- **Immediate Infrastructure Telemetry:** As shown on the live mobile device interface, a frontend ticket submission instantly bypasses traditional desktop boundaries, pushing a **live system alarm (CISD-5 Incident)** straight to the administrator's lock screen.
- **On-Call Responsiveness:** Proves the engineering capability to handle high-priority corporate emergencies remotely. The on-call administrator is immediately alerted to critical incidents, allowing for immediate triage and resolution steps without being chained to an office desk.
